

## Due Diligence & Grid Advisory

---

The Galetech Energy Services team draws upon this wealth of experience and leading resource required to successfully develop and execute wind energy projects.

Our due diligence team provides lenders and developers with reassurance that the project can be constructed as consented. We examine all technical, commercial, environmental and consenting aspects of a project and generate an action plan to address issues identified.

We have extensive experience in carrying out economic cost benefit analysis including project specific economic modelling to assess the financial viability of a project and conduct sensitivity analysis to test changes in key value drivers.
